

Market Research and Customer Delivery Workshop

Steps of a marketing process

Market Study

⇒ You collect data about customers, competitors, trends, and preferences.

Goal: Understand the market to **inform strategic decisions**.

Marketing Strategy ⇒

- This is the **decision-making phase** based on the research.
- You define goals, choose target markets, set positioning, and make the **4Ps** decisions (Product, Price, Place, Promotion).

Goal: Create a plan that connects your product with the right people.

Operational Market ⇒

- This is the **execution** of the marketing strategy.
- You launch campaigns, distribute content, manage sales channels, etc.

Goal: Put the strategy into action through real-world marketing efforts.

Control Market ⇒

- This is the **monitoring and evaluation phase**.
- You compare results with your objectives .
- If something's off? You loop back to analyze and adapt.

Goal: Ensure goals are met; if not, **optimize** the strategy.

Study Market Approaches

Quantitative Approach

Goal: Get **measurable** data from a **large sample** so you can generalize to a population.

- use surveys to collect data

Used for:

- Estimating preferences
- Understanding trends
- Validating hypotheses

- **Confidence interval:** Gives a range where you expect your real results to fall.

| Example: 95% confidence = you're 95% sure the real value is in your estimated range.

- **Margin of error (e.g. ±5%):** Acceptable error in your data.

| Means you're okay being off by 5% — it's not perfect, but it's statistically chill.

Qualitative Approach

Goal: Understand **why** people behave the way they do — feelings, motives, beliefs.

Examples:

- Interviews
- Focus groups
- Open-ended questions
- Observations
- **Netnography:**
 - Think anthropology + internet = netnography
 - You analyze customer reviews, forums, comments — basically **online behavior in natural settings**.
 - Example: Reading 100 Amazon reviews to figure out what people *really* think about your product.

Used for:

- Exploring needs
- Finding insights
- Building empathy

For strong results, we start with **qualitative** research to explore ideas, then use **quantitative** research to measure and validate them.

The **indexing of your website in Google** is crucial because if your pages aren't indexed, they **won't appear in search results at all**, meaning no visibility, no clicks, and basically, your site is invisible to the world.

Helpful Tools

(**Not all the tools are free**, and many come with **limited free plans** or **paywalls for advanced features**.)

Apify tool

- ➡ is a **web scraping and automation platform**.

It lets you extract structured data from websites at scale — like product listings, job offers, social media profiles, etc.

<https://apify.com/>

HotJar Tool ➡

What it does:

- Hotjar is a **behavior analytics tool** for websites.
- It gives you heatmaps, scroll maps, session recordings, feedback polls — all the stuff that shows *how* users interact with your site.

Why it matters:

- You see where users click, rage-click, or drop off — basically, what's working and what's killing your conversions.

- Helps with **UX optimization** and **conversion rate boosting**.

Use cases:

- Fix UX issues
- Improve funnel performance
- Validate redesigns
- Understand user pain points

SEMrush

Use:

- Keyword research, backlink tracking, SEO audit, content planning.

Why:

- It helps you spy on competitors, find what people are searching, and boost your site's Google ranking.

AlsoAsked – *Map what users ask on Google*

Use:

- Shows you the "People Also Ask" questions for any search term.

Why:

- Great for understanding search intent and expanding your content with real user queries.

AnswerThePublic – *Keyword inspiration with a human twist*

Use:

- Visualizes search queries based on prepositions (how, why, what, where...).

Why:

- Amazing for content ideas and keyword-rich blog topics.

KEY INDICATORS

- Highly Searched
 - Avg. Searched
 - Lowest Searched
- All CPC data are in USD

Answer The Public
by digital

HubSpot – CRM, marketing, and sales powerhouse

Use:

- Manages your customers, emails, marketing funnels, and website forms.
- **Create Buyer Personas** directly in the platform.

Why:

- Helps you automate marketing and manage leads.

Think of it as: Your all-in-one sales & marketing machine.

A **buyer persona** is a **semi-fictional representation of your ideal customer** based on real data, behavior, and a sprinkle of educated guessing.

It's like creating a full-on **profile of the type of person** you're marketing to:

- Who they are (age, job, location)
- What they care about (goals, pain points)
- How they behave (how they buy)

Why it matters:

- Helps you target the **right people**, not randoms.
- You'll write better content, ads, and emails because you know who's on the other side.

Instant Data Scraper (Chrome Extension)

Use:

- Scrapes tables and lists from websites in one click (no coding).

Why:

- Fast, easy way to grab structured data without setting up a scraper.

Think of it as: Copy-paste on steroids for data tables.

Kadoa – AI-powered no-code web scraper

Use:

- Extracts data from dynamic or complex sites using AI .

Why:

- Good for non-techies or when traditional scrapers break on JavaScript-heavy sites.
-

Phantombuster – Automation + scraping

Use:

- Automates actions on LinkedIn, Twitter, Instagram, etc. (scrape profiles, send messages, extract data).

Why:

- Saves you hours of manual work when doing lead generation, outreach, or research.
-

Key Data Sources in Algeria

1. Office National des Statistiques (ONS)

- **What it is:** The official stats agency in Algeria.
 - **Use:** Economic indicators, population, unemployment, household spending, inflation — all the core macro data.
 - **Why it matters:** It's the most reliable **government-level data** for big-picture market analysis.
-

2. CNIS – Centre National de l'Informatique et des Statistiques des Douanes

- **What it is:** Customs and foreign trade statistics center.
 - **Use:** Import/export data, trade balance, tariffs.
 - **Why it matters:** Crucial for analyzing **international trade flows and opportunities**.
-

3. CNRC – Centre National du Registre du Commerce (via Sijilcom)

- **What it is:** National business registry.
 - **Use:** Access info on registered businesses, their turnover, legal form, and industry.
 - **Why it matters:** Lets you **study competitors** and check **financial performance** data.
-

4. CIB Web

- **What it is:** Online platform related to **electronic banking and card payments**.
- **Use:** Trends in card usage, POS payments, and online transactions in Algeria.

- **Why it matters:** Useful for tracking **digital payment adoption** and e-commerce behavior.
-

5. GIE Monétique (Groupement d'Intérêt Économique Monétique)

- **What it is:** Central body for Algeria's e-payment ecosystem.
 - **Use:** Reports on ATM withdrawals, card payments, contactless trends.
 - **Why it matters:** A must-have if you're targeting **fintech, retail, or online payments**.
-

6. Tableau de Bord CARE

- **What it is:** Economic dashboard published by **CARE (Cercle d'Action et de Réflexion autour de l'Entreprise)**.
 - **Use:** Business climate data, private sector analysis, and economic trends.
 - **Why it matters:** Offers a **private-sector perspective** beyond state numbers.
-

7. We Are Social / DataReportal (2025)

- **What it is:** Global digital report with Algerian stats.
- **Use:** Internet usage, social media adoption, mobile connections, e-commerce habits.
- **Why it matters:** Ideal for **digital marketing** and understanding online consumer behavior.
